SKIN2P Body[®] & SCREEN2P Wear[®] Icaridin Kit

Insect Double Protection Kit for Skin and Clothing

DESCRIPTION

Vector-borne diseases such as Yellow Fever, Zika, Malaria, Chikungunya and Leishmaniosis are killing over 1 million people every year, with just 1 bite.

With mosquito bites occurring at day as at dawn, sunset and night, **SKIN2P Body[®]** is the ideal long lasting protection needed by the travellers to stay safe during all they journey and stay. SKIN2P Body[®] is a non-flammable, Icaridine based insect repellent for skin. Its exclusive formulation provides proven protection for 8 hours against mosquitos, ticks and phlebotomies, with one application .

With 40% of the bites occurring through clothing, **SCREEN2P Wear[®] Icaridin** is the ideal long lasting protection needed on clothes by the travellers to stay safe during all they journey and stay.

SCREEN2P Wear[®] Icaridin is a non-flammable insect repellent for clothes. Its exclusive water-base formulation provides 8 day proven efficacy.

Brought to you as a convenient kit, and used jointly, SKIN2P Body[®] and SCREEN2P Wear[®] Icaridin double protection give you the best complete solution against vector borne disease for the traveller.

DISPOSAL

Dispose of contents/container to hazardous or special waste collection point, in accordance with local, regional, national and/or international regulation

APPLICATION – USE / See next page

TECHNICAL DATA SHEET

APPLICATION - USE

SKIN2P Body® spray

The spray delivers a dose of 0,1mL (~0,1g)

Dose to apply: 1g of product per 600 cm²
600 cm² is the estimated surface area of a forearm

When application involves the face and 2 forearms, one 30ml spray unit provides for 10 applications

1. Spray directly onto the parts of the body to be protected. For the face, spray the product on the hand before applying it.
2. Spread the repellent evenly on healthy, clean, dry skin.
3. Repeat the application 2 to 3 times a day if sweating, and routinely after each swim.
4. In humid climates, renew the application more frequently.
5. Apply the repellent at least 20 minutes after sunscreen.

Test the product beforehand on a small portion of skin. Wash hands before eating.

Do not apply on mucous membranes.

Use biocides with caution. Before use, read the label and information concerning the product.

SCREEN2P Wear® Icaridin spray

The spray delivers a dose of 0.3mL (~0,3g)

Dose to apply: 17mL of product per 1 m²

The 100ml bottle enables the treatment of 4,9m² of fabric (more than 4 shirt + 4 pants).

The 30ml bottle enables the treatment of 1,8m² of fabric (equiv. to 2 shirts + 1 pants).

1. To spray vertically place, the garment on a hanger.
 - a. Shake well and then spray 15 cm from the garment; A single spray in the same place, at a distance of 15 cm, is enough to achieve the dose required for efficacy.
To guarantee even distribution of the product on the garment at the recommended dose, carry out juxtaposed sprays, i.e. the spraying rounds must be physically close and they almost touch each other.
Repeat the treatment on the back.
 - b. For garments that are laid flat, tilt the bottle slightly and spray at a distance of 15 cm from the garment. Impregnation is checked visually by the change in colour due to the fabric becoming damp.
2. The drying time is 30mins to 1 hour, depending on the temperature.
3. Renew the application after 8 days.

Test the product beforehand on a small portion of fabric. Wash hands before eating.

Use biocides with caution. Before use, read the label and information concerning the product
